

Dough DAO (DAOugh) Grease Paper

Dough DAO - Bringing pizza into the 21st century!

For what do we stand?

We are excited about pizza and we are excited about smart contracts, so we use smart contracts to make better pizza!

DAOugh was created to bring together all people who love to create pizza, and who love to create innovative web3 technologies.

Tokens

The first step in the DAOugh roadmap is to create a governance system. While we intend to have multiple avenues to obtaining ERC20 tokens. The first two ways that will be available is through the use of <https://libraryof.pizza> and through interaction with the community (mostly on discord, but not exclusively).

Users will be rewarded with one of following **4 ERC20 tokens**:

- Flour Token
- Water Token
- Salt Token
- Yeast Token

When someone has obtained one of each of these tokens, they will then be eligible to earn/purchase/be rewarded Dough Tokens (just as in real life, you can't create dough without these 4 fundamental building blocks). The uses for the Dough Tokens will be many, the first and primary being eligible to vote. More on this below. The second use is to spend Dough Tokens mint Recipe NFTs on... you guessed it, Library of Pizza.

Voting

Anyone who holds dough tokens, regardless of how they obtained them, will be eligible to vote. The votes will be weighted, so a user with more Dough Tokens has more weight in the vote.

Dough Token other uses

There will be other uses for the Token as and when new Technologies are created by those within the DAOugh. The first available will be spending the token to unlock a page on <https://libraryof.pizza> and chats in the Discord.

The ongoing plan will be for the community to decide what the Dough tokens can be used for. Anyone can create technologies that make use of the token, but to be included they must achieve 50%+ approval in a DAOugh vote.

Accessibility

The chosen network for the tokens will be the **Ethereum Rinkeby Network**. This is a decision made to keep the community accessible to all. While there may be a future move, this will allow people new to the world of web3 to join without fear of losing money, and to encourage new pizza technologies to be created at £0 real world cost.

Team

The initial team (with governance tokens) consists of Tim Smith and XXX, who are the founders, as well as 3 honorary founders for their role in the education of the founders - **Al, Dan and Cody of ChainShot**.

Discord

To get involved, join the discord here: <https://discord.gg/dyNrqv327w>

Library of Pizza

The reason the library is used in the DAOugh and mentioned in the whitepaper is purely a relationship of convenience, and not preference. They happen to be the only pizza technology that the founders know, and its not to be mistaken for nepotism (Tim is the founder of the library and the DAOugh).
